A superb Vox Foundation Bass amp. These were the first Vox solid state series of amps & were made between 1967 - '72. This is one of the later ones, around 1971. The amp is in pristine, totally unmarked condition, It has a 2 input bass channel & a 'normal' channel for lead/rhythm/keyboard. I don't have the foot switch, but you could easily get one made up. Everything is working fine & has a great sound & fantastic looks. One owner from new (before me). Never gigged. *Please note* The Dynamic Bass speaker cabinet in the pics has been sold. I can accept payment by cash, credit/debit card or Paypal (Please add 4% for Paypal fees). UK mainland delivery can be arranged for £12.00 (plus insurance if required) Please message or ring me on 07796 081954 if you want to try it or have any questions Thanks,.
