Education for life is a one stop download for all your child's educational needs. This software contains many resources to help your child practice many different things. They can take maths tests including addition, subtraction, and multiplication. These tests have been designed for a person at a very basic level that just wants or needs practice. The tests are timed and they can be reset which means they can be taken repeatedly. Each test is scored so you will see how many questions you get right or wrong. Most tests expect you to score 20 correct answers, if you do the tests will just move you up to the next level. I have created a top 10 scoreboard for some of the tests. If you are good enough all users of this software will see your score.

I have created a multiple choice section for the addition which is great. Kids love this and find it exciting, it pushes people to their limit. It helps make them faster at figuring out the sum. The multiple choice addition has 2 levels for you to try.

Some of the addition and subtraction maths tests give you the choice of taking 20 or 40 question tests. The conversion software is up and coming it converts between many different units. Some examples are Time, Temperature, Digital data, Weight, Liquid,

Spellings is another great section which just keeps getting better. We all know school children get spellings on a regular basis, certainly in early years. This software gives you the chance to enter the

spellings in to the computer and save them. You can then take the audio test where the computer reads the words out to you. The test is timed and the computer will mark the words as you go. You can see how many correct answers. There is also a bring your own words in section and export some information to other word lists. If you are a teacher or know what you are doing this is a great tool for what it is made for. It is a 30 day free trial download only.
