I have created a multiple choice section for the addition which is great. Kids love this and find it exciting, it pushes people to their limit. It helps make them faster at figuring out the sum. The multiple choice addition has 2 levels for you to try.

Some of the addition and subtraction maths tests give you the choice of taking 20 or 40 question tests. The conversion software is up and coming it converts between many different units. Some examples are

- Time,
- Temperature,
- Digital data,
- Weight,
- Liquid,

Spellings is another great section which just keeps getting better. We all know school children get spellings on a regular basis, certainly in early years. This software gives you the chance to enter the

spellings in to the computer and save them. You can then take the audio test where the computer reads the spellings out to you. Once the test has finished the computer will mark them and show you any incorrect answers.

Share with a boring word to live in a boring and explore some information about other words in the world you ever wanted to know and find out to is from the test or what words is made from. This is a 30 day free trial download only.
