Dental implants offer you a great permanent alternative to dentures, bridges and crowns. Dental implants will restore your teeth to their full functioning state, giving you the confidence to smile with pride. The implant is a small titanium screw that will create an artificial root, in the jaw bone. The area around this screw will need to heal to ensure a strong foundation is created for the aesthetic (crown, bridge, and denture) to be placed on top of, this process takes about 2-3 months to do so. There are many factors to consider when deciding to have dental implants. Not everyone may be a suitable candidate and the dentist will need to assess your mouth health and bone level to see if this treatment would be a successful process to proceed.
