we at Lead alert ltd, fix unsightly ,damaged lead flashings and make stunning again seriously adding to your property value. the problem being that your builder in most cases has fitted inferior lead from abroad that corrodes (rusts) reacts and flakes and tears causing water to leak into the property causing other areas to be damaged, it also creates a danger as lead and its particles are toxic ,check it out on google, but not all is lost as we have the solution thanks to our procedures and unique products we can make it incredible again not replacing as that would be a massive expence plus the lead they fit would be nastier than what is already fitted. now I work on mansions and properties 200 years to 300years of age and the lead flashings are still original, no corrosion, flaking or tears causing leaks because real lead has always lasted more than 200 years so what has happened. builders are fitting the cheapest product they can get from abroad and it is basically contaminated and this is rife throughout the united kingdom especially in the last 16 years this applies mostly to new build estates, some have had pieces replaced or all replaced and it quickly goes the same way, well we can stop the corrosion that eventually leads to leaks into your home, remember no-one can do this process it is my unique products that allow this to last many house-owners have tried to cover up the obvious problem but the lead and the corrosion reacts and rust bleeds through and then the paints and coating all flake off making the area unsightly and dangerous again . the finish is stunning like new lead and it stays like that. we are not expensive and I can assure you whatever the cost you the homeowner gain ten times the value plus more on kerb appeal. I have completed 16 properties in one new build estate out of only 27 homes and added value to every house as that estate is now so desirable, look close at my photos as I seal the complete area every flap, gap, tear and fix all damage and cement into one flexible waterproof area and I photograph the whole procedure for you to

see what's involved. incredible workmanship. we also fix fibreglass canopies to match as they crack and disintegrate many people think all the problems has caused is water seeping directly into the property and that it will be even worse in new homes as they have no lead flashings. the price is 1000 per lead.
