I bought this keyboard at the end of october 2015 (from Fair-Deal music store, Birmingham), so warranty is still valid. It comes with the usb cable, midi interface is integrated into the keyboard therefore you REALLY plug and play! I'm moving back to Italy soon and I can't take it with me, that's why I sell it. As a jazz pianist, I've been very satisfied by this keyboard in the last few months. It was great for technical excercises and for free playing as well.

It features 61 full-size velocity-sensitive keys and a series of controls that expand the range of playable notes, expressive capabilities, and enhance your recording workflow. Use the octave range buttons; pitch-bend and modulation wheels; and transport and directional controls to play, perform, and record with your music software without using a mouse or trackpad. Keystation 61 also includes a 1/4" (6.3mm) sustain pedal input that lets you use an external control pedal (I can give the pedal for 10£ if you need it). Lightweight.

USB-powered, class-compliant, and supports USB-MIDI.
