Getting email addresses from internet for email marketing now gets easier with web email extractor tool. The tool consists of latest and extraordinary features that make extracting email ids adventurous. The tool has the ability to extract email ids from websites whose URLs are provided. In the absence of URLs you can also use Keywords related to your search. The tool explores various search engines like Google, Yahoo, etc. and gets data from there. It also has option to update the search engines so that you get the latest data. The tool automatically eliminates duplicate ids from the extracted list thus saving huge time and effort of yours. The list that is harvested can also be saved either in Excel or Text file for its utilization in future. This is the best option to extract email ids from websites in bulk. Feel free to contact us if you have any query regarding this. Email us at: [email]
