Stem cell activation is an advanced technique to promote your own natural hair growth. It is known that there are stem cells left in every hair shaft, even when there is no hair growth or even follicle. Results will be improved when special growth factors are used. These growth factors are a special peptide which works like a signalling agent, which activates your own stem cells. these growth factors are a non human peptide, which are safe and will not harm your skin or health. Your success will depend on the use of hair rescue scalp lotion every day, it is 100% plant extract which keeps hair follicles much longer in the growth phase (an agent phase) It will make your hair stronger, promote pigmentation and thickens your hair. This treatment can also be used on eyebrows and I have aftercare wands
