What does a PAT test consist of?

We start with a visual inspection checking for:

Damaged flexes

Damaged plugs and equipment (overheating, burn marks, discolouration)

Correctly wired plugs

Correctly rated fuse

Then a series of tests (depending on the class of equipment), they may include

Earth continuity testing

Insulation resistance

Polarity test

Earth leakage test

Does PAT Testing affect our insurance cover?

Insurance companies assume that when giving insurance cover to a business, the owners of that business are complying with all regulations necessary. An insurance company may reduce, delay or even refuse to pay on a claim for damage if an appliance that has not been tested has caused the damage. Check the details on your policy if you are unsure today rather than find out too late when a claim is needed!

We At Tyne And Wear Electrical PAT test across the North East of England

How much will my PAT testing cost?

For the first 30 appliance: £80.00

31-100: additional £1.00/item

101+ items plus £10.00 plus a quotation
