Installing Canon driver software is simple and quite hassle free. All you need is having driver software CD that comes with the printing machine. To start installation, insert CD to your computer's DVD drive. Now, an installation wizard will start automatically, asking you for starting the installation process. Click on install to start installation, and then follow the instructions in a few stages. Installation may take only a few minutes, and after that your system will be ready to restart. Restart system and you shall find driver's software have been installed properly. For uninstalling visit control panel and then click add or remove program. Select driver program for printer and then uninstall by Dell Printer Technical Support Service Number . Visit:- <http://www.printer-phone-number.com/dell-tech-support>
