New! Comfort Lining Thermoplastic Denture Adhesive EX is the new alternative product to Cushion Grip. Comfort Lining Thermoplastic Denture Adhesive EX is heated up in hot water for five minutes for the thermoplastic to become pliable enough to adhere to your dentures. After adhering your Comfort Lining thermoplastic adhesive, you will then wonder why you ever chose to use a paste adhesive. If you're suffering from thrush or burning tongue syndrome Comfort Lining can help with problems concerning those areas, by not applying denture adhesive everyday as you would with paste denture adhesives. Comfort Lining is only applied once a week for a long lasting secure cushion fit. Comfort Lining helps with painful gum sores that arises with the hard plastic dentures rubbing onto the sensitive gums, by placing Comfort Lining thermoplastic denture adhesive on your dentures you will then have a cushion to protect those sensitive gums. No more rubbing or stinging sensation while your eating. For more details on Comfort Lining, visit our website for helpful videos and how to apply.
