IPL Hair removal Laser hair removal is the process of removing unwanted hair by means of exposure to pulses of laser light that destroy the hair follicle. It is a fast, virtually painless method of removing unwanted hair and is ideal for both women and men. Permanent laser hair removal and reduction has been extensively researched, tested and proven highly effective in permanently reducing and removing unwanted hair. Consultation At JD Aesthetics the first step is a free consultation and patch test to ensure you are compatible for treatment. At this stage we will also discuss cost and a payment plan to suit your needs. A minimum of six treatments is generally recommended depending on the area to be treated. Most clients book in for one area but invariably upgrade and come back for more... effectively throwing away the razor! From Brazilians to Hollywood's or just your normal procedure JD Aesthetics will make sure you are ready to bare in that bikini. The bikini hair removal has the highest success rate of hair removal performed with IPL. No more in growing hairs or nasty marks as a result! Shaving and waxing are a thing of the past. Full legs and bikini are the biggest and best investment on you, saving lots of years of using dipilary creams and waxing and most of all your precious time. The results enables every man and woman to continue with everyday living and participation in sports confidently with total comfort. Vascular Lesions (Thread Veins, Spider Naevi, Telangiectasia, Campbell de Morgan, Rosacea, Port Wine Stains) We can provide long term solution to facial problem such as red flushing (rosacea), thread veins and other types of red spots in just a few quick and easy treatments. Thread veins are tiny veins that appear most commonly on the cheeks, nose and legs. Small thread veins are red, but the large ones look purplish, they have many names i.e: spider veins, broken veins and capillary veins. Normally the tiny veins in the skin are invisible but in some people they expand and show through the skin. A few reasons

for this one is too much sun exposure, pregnancy and they also may be inherited. The veins are more common in older people, but can also become a problem for younger people if its caused by sun damage. (Consultation) Elastin is a natural protein that provides structure and firmness to the skin. As we age, the production of elastin decreases, leading to skin laxity and wrinkles. IPL treatment offers a non-invasive solution for addressing signs of ageing. By stimulating collagen production over time, IPL helps its laxity. As a result of this, the collagen is replaced, which leads to a more youthful appearance. IPL is a non-invasive treatment for skin rejuvenation and is proven to increase the firmness and laxity of the skin by stimulating collagen and elastin production. IPL Skin Treatments are a safe, effective and popular way to improve the signs of ageing from the face, neck, chest, arms and hands. Treatment typically requires four to six sessions of about 20 minutes each, performed at three/four week intervals requiring no downtime. In fact, many people even schedule their sessions during their lunch breaks. Additionally, IPL treatments are customized to each individual's specific skin type and condition, providing the best possible results. Acne (Mild to Moderate Acne) Acne can be effectively treated with Intense Pulsed Light alone or in combination with other clinical treatments. Intense Pulsed Light

treatments greatly reduce the number and severity of active lesions, lessening the inflammation and frequency of break outs. Acne isn't just for teenagers. In fact, many people are plagued by adult acne and into their 30's, 40's and even 50's. It is a very common skin disorder that affects all ages but is most common in young people especially around early puberty. It is caused by inflammation of the small oil glands (sebaceous glands) that surround the fine hairs on the face and chest. Adult acne is becoming more commonly talked about, and can be quite distressing. So you don't have to grin and bear it anymore. Pigmentation Lesions (Sunspots, Age spots, Liver spots, Solar Lentigines, Cafe-au-Lait Spots, Freckles) Pigmentation lesions such as sun spots and freckles can be successfully removed creating a more flawless, youthful and glowing appearance. Intense pulsed light (IPL) is a non-invasive and non-ablative treatment that uses high intensity pulses of visible light to improve the appearance of the skin.

A full consultation and Patch Test is required before the onset of any of the above treatments. In most instances multiple treatments are required. FACIALS AND MASSAGE Younger looking skin takes a bit of work a regular daily skin regimen is vital as skin ages. We all know the steps – cleanse, tone, ex-foliate and moisturise but are you doing it?
