

Anti-wrinkle Treatment Botulinum Toxin A (BOTOX®) is widely known and widely used. This can be used in the facial muscles and allow wrinkles to be relaxed by restricting movement in the facial muscles. It is very safe to use and has been used for over 30 years for other medical conditions including blepharospasm and muscle spasticity. It has been approved for cosmetic use by the FDA and MHRA. It is a prescription only medication and therefore needs to be prescribed to you by our pharmacist independent prescriber during your initial consultation. â€ Treatment areas include: Glabella lines (between eyes) Forehead Crow's feet (side of eyes) Dermal Fillers & Lip Augmentation There are many dermal fillers on the market and the few leading brands have got the most clinical safety data and efficacy data. The dermal fillers we use at Smooth&Flawless are synthesised from hyaluronic acid, which is globally the most popular type of dermal fillers. Hyaluronic acid is also used medically for joint pain, and medical aesthetic applications. It is also supported in the collagen skin matrix. The component is slowly absorbed over time as the molecules that are present in the fillers mimic the natural compounds found in the collagen of the skin. The collagen in the skin over time reduces, causing the drooping effect and the developing of folds and creases. The dermal fillers allow this to be restored to its natural self by temporarily increasing the collagen production in the skin, allowing the skin to become firmer and volumised. â€ Treatment areas include: Lips to provide definition and/or volume Peri-oral lines (around the mouth area) Naso-labial lines (nose to mouth lines) Marionette lines (mouth to chin lines) Sleep lines Can be used in combination with Botulinum Toxin A (BOTOX®) for deeper lines Medical Grade Skin Peels (Agera®) The medical skin peels provided can be used to treat ageing skin, acne, scarring and hyperpigmentation. Unlike conventional facials, these skin peels penetrate into the skin, remove the dead

skin cells to encourage the stimulation of collagen and elastin to rejuvenate the skin for a more youthful appearance. The peel also targets dark spots, blemishes and redness caused by acne scars. The resulting hyperpigmentation by resulting in even skin tone. The AGERA peel will provide immediate visible results and will not result in skin shedding or peeling. Clients can choose to have the treatment as a course of 3-4 treatments every 14 days, or a maintenance treatment is recommended 3-4 months after initial treatment. The initial stages of the treatment will involve cleansing the skin. It is advised that clients wear no makeup for this treatment. The practitioner will then use a prepping solution to prepare the skin for the peel. The peel is applied to the skin and is activated by the application of cold water. Clients may choose to add a microdermabrasion treatment into the peel treatment. The type of treatment you will receive will depend on the outcome of your consultation. The peels that are provided by Smooth & Flawless are listed below: The Peel System - delivers a high level of L-Ascorbic acid, provides the benefits of a peel with low irritation, helps enhance the dermal matrix.
