

## West Midlands, Warwickshire

If your fascias are flaking and your soffits sagging they can be replaced quickly and easily with home trim and you'll never need to paint or patch again. Most houses have timber fascias. These are the boards that support gutters and timber barge boards, these are the boards that clock the gable end, both may have plywood or asbestos cement soffits. Because they are hard to get at, they are often neglected during painting. When paint flakes and timber becomes bare, wet rot can occur, not only in fascias and bargeboards but also in the more important support timber framework. **WET ROT IS THE PRIME SOURCE OF DEVASTATING DRY.**
