Comfort Lining offers a new breakthrough in denture adhesives. Our thermoplastic denture adhesive brands will allow you to wear your dentures up to one full week without changing applications. No more applying denture paste every time you want to enjoy a meal, Comfort Lining will cushion the area between your gums and dentures, making a more comfortable fit. Comfort Lining doesn't stick to your gums, so you won't have that messy, sticky denture adhesive to scrape off. Comfort Lining denture adhesive works by, heating the thermoplastic denture adhesive in a small aluminium tube in hot water, by heating you're activating the thermoplastic to become pliable. After your thermoplastic has become pliable, then you're ready to apply Comfort Lining to your dentures. Comfort Lining denture adhesive is also a waterproof denture adhesive, meaning unlike other paste denture adhesives brands get sticky and or slimy, Comfort Lining will stay firm and intact unlike other denture adhesives. For more details on Comfort Lining denture adhesives, visit our website at <https://www.ComfortLining.com>
