

Augmented Reality Can Benefit Architecture And Interior Design

Location

South East, Middlesex

<https://www.freeadsz.co.uk/x-500075-z>

Augmented reality could benefit many areas of the design development process by giving the opportunity to touch and interact. This won't just communicate better 3D awareness of a completed project, but it gives the chance for changes and modifications. The materials, patterns, color palettes and building facades can be experimented with and easily changed.

Address: 152/160 City Road, London, EC1V 2DW, United Kingdom
