SAP HANA : SAP HANA(high-performance analytic appliance) is an application programming language which uses in-memory technology information to permits the processing of the large amounts of real-time data knowledge in a short period of . The in-memory computing engine permits the HANA to process the data stored in RAM as opposed reading from a disk. SAP HANA removes the burden of separately maintaining the siloed data and legacy systems, so then you can run live and make better decisions in business and in the new digital economy. OverView: The index server of SAP HANA performs different assignment like transaction of management, authorization, management of the sessions and processing of the commands. The database has both a columnar store and a row store. The Users of sap hana can create tables using either columnar store or row store. The columnar store has more capabilities and frequently most used as compare to row store. The index server also used to managed the persistence between both the database objects and the cached memory images, it has permanent storage files and log files. SAP HANA (it is also known as SAP HANA Data Modeling) and it's a part of HANA application development. The highlights of Bytes online training: SAP HANA Online Training provided by Bytes Online Training with 12+ years of highly experience certified trainers, Provides Job assistance online training. Bytes Online Training offers you FREE LIVE WEBINAR, helping into crack interview questions and answers. Bytes Online Training is online training portal with a decade of best experience in web based online training and it has established itself as one of the dominant online training portals. We are known for providing high quality Online IT courses with latest technologies. We made our teaching methods in such a way that you can learn through online in a simple way. To register for our IT training courses in USA Please call us on +1 732-593-8415 or Send an email to : click to contact Website:
