Whether you buy for DIY or ask us to apply, The Patio Black Spot Removal Company Limited, specialise in the removal of black spots, white fungus, moss and algae from patios and other garden stonework. We have over 30 years experience in stone cleaning/restoration and we can very proudly say we have developed the only D.I.Y product in world, Patio Black Spot Remover, that can remove black spots from your stonework whilst being completely biodegradable, safe for pets, plants and also undamaging to the stone. Patio Black Spot Remover will also restore the natural colour back into your garden stonework leaving it looking as good as the day it was laid. The instant results of our products outshine leading patio cleaners that are already available on the market. Patio Black Spot Remover contains no acid or caustic making it safe for the general public and environment. The Black Spots on your garden stone/patios are actually black Lichen which feed off the minerals within the stone. The lichens grow not only across stone but also down into the stone so effectively rooting themselves and making it almost impossible to remove with other products or power washing alone, whilst growing 2mm a year and becoming more and more unsightly. Our product, Patio Black Spot Remover, will penetrate deep into the pores of the stone killing the lichen from the root up. Not only will the Patio Black Spot Remover remove these Black Spots, but it will also restore your stone bringing back the vibrant colours it once had. Whilst Lichen and Algae spores are constantly landing on your stonework our product also prevents regrowth for up to one year from the point of treatment, after which time you should use our Patio Black Spot Preventer which kills any spores that land on the surface preventing re-infestation/'The Return Of The Black Spot' when used annually. It will also remove any green algae within 5 days of application. This is simply spray and leave so power washing year in year out becomes a thing of the!
