BOLIY Pro3600Si INVERTER GENERATOR

This is a pure sine wave inverter generator.

The fuel pipes have been modified to enable the option to connect to a large external petrol tank so it could run all night if required, this can be achieved by use the 3-way changeover fuel tap which has been fitted.

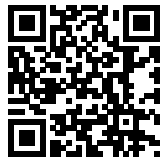

In excellent condition, but being sold as 'Spares OR Repair'.

2010 Model which I have owned from new. It was purchased to power my house if we had a power cut....which it did just fine. Has only been used for maybe 30 - 40 hours in total, but is now sadly being sold for 'Spares OR Repairs' due to the automatic throttle control now not working, it did but then the revs went really high, would not come down and now it wont rev up, to my knowledge this is the ONLY FAULT – everything else works perfectly. The generator starts and runs, produces mains electricity as normal – but the throttle only runs at tickover. I have dismantled some of the casing to see if anything had broken – there is nothing broken, I can increase the engine revs manually using my fingers which then will produce it's full watts output, but at tickover the watts available is only low. It can be used 'AS IS' if you fix the throttle at a set position to produce the watts you require.

I have been on some American websites where parts are available (No parts seem to be available in the UK so far) and I have the information which could be sent to the manufacturer. It seems that the generator is a BOLIY J07 model, which is a speed 1000W generator. It is a 2005 model, and it is a fault, but it is still working. I have been on ebay and I have found it for £105 including postage, but I don't have the time or the interest to fix it. I am sure this is a good deal for someone who knows what they are doing.

Collection ONLY from Longfield, Near to Dartford in Kent, DA3.
