TOMI PRO Putting Analyser MEASURES 8 PARAMETERS OF YOUR STROKE £5.00 UK postage How TOMI Evaluates Direction Alignment at Address – Insight: Having established the intended Target Line for the putt, how well can the golfer consistently repeat the address position over a series of putts? Measure: Degrees the club face is open (+) or closed (-) to the target line, as established in the golfer's setup calibration. Measured in 10ths of a degree, a maximum of 20 degrees open/outside (+) and 20 degrees closed/inside (-) versus the target line. Alignment at Impact – Insight: Does the golfer have a tendency to strike the ball with the club face open or closed in relation to the target line? Measure: Degrees the club face is open (+) or closed (-) to the target line, ranging from -20 to +20 degrees. Scale is in 10ths of a degree. Path at Impact Insight: Does the golfer's forward stroke path merge perfectly with the Target Line through the impact zone, or is the golfer cutting across the line? If so, how bad? Measure: Degrees the stroke path cuts across the Target Line at impact, either inside-to-out (+) or outside-to-in (-). Measured in 10ths of a degree, a maximum of 20 degrees open/outside (+) and 20 degrees closed/inside (-) the Target Line. Stroke Path and Rotation Insight: What is the overall shape of the stroke in relation to the Target Line? Measure: TOMI provides three very telling views of the total stroke: a white line tracing the path from the starting position of the backstroke to its end; a colored line tracing the path from the beginning of the target stroke to impact to follow-through; and the degrees the club face is rotated open (+) or closed (-) in relation to the Target Line at the end of the backstroke and forward stroke. How TOMI Evaluates Distance Shaft Angle Insight: Is the golfer delofting, or adding loft to the club at impact? Is this a consistent tendency, or an erratic problem. Measure: The angle of the shaft at impact, relative to a perfectly vertical line. Measured in 10ths of a degree, the spread being +/- 10 degrees. A positive reading

= added loft. Negative = delofting the club. Impact Spot Insight: Is the putter consistently striking the ball in the original sweet spot? Measure: The putter should strike the ball in the sweet spot, or within 1/2 inch of it, either side of the spot. Impact Spot Fall Out Insight: How much does it take to complete the putt from the beginning of the backstroke to impact, and how consistent is the timing? What about the overall stroke tempo, the relative timing between the backstroke and the forward stroke? Measure: Elapsed time in seconds, with separate readings for the backstroke, the forward stroke to impact, and the sum of the two. Scaled in 100ths of a
