

Wireless temperature monitor system in real time and alerts

Location **South East, Kent**
<https://www.freeadsz.co.uk/x-542276-z>

A wireless chill temperature monitoring system which works with Hub wifi, and collects and sends data to a cloud server. This data is easily accessible anytime and anywhere via pc or smart phone with internet.

This is an ideal affordable solution for refrigerated vehicles and cold rooms.

I have worked for Frank dale foods and other foods manufacturing plants in the past, have noticed that we used a manual method.

This system is smart and guarantees accurate data.

Please let me know if you need more information on how it works and its advantages over other similar devices.
