Power Tool repairs and modifications. Cordless and Coded. All makes and models.

Has your drill's battery died? Too expensive to replace? Not a problem. A different power source can be used to power it up.

I can convert your power tool to run off a car's battery, another tool's battery or the mains (100V-240V AC to 5V-12V-14V-18V-24V-36V-48V DC).

For more information please visit: facebook.com/toolrepairman

Please see all the photos attached.

In order to run a battery operated tool (or any other device) from the mains, an electronic device (rectifier) has to be connected to the tool. This device transforms 240V AC (from the mains) to 5V-12V-14V-18V-24V-48V DC (direct current same as the battery). This will allow you to operate a previously battery only operated power tool, from the mains (any socket at home). 100% safe and secure.

You will still be able to use the tool with a battery (in most cases) if you have one, as the modification will not interfere with the original battery connections (although in some cases that will not be possible).

The same technology can be applied to gardening tools, i.e. battery operated strimmer or a hedge trimmer.

A number of conversion options are available to choose from. I will explain to you in detail how each conversion scheme works, so that you can make an informed decision. Call me to discuss it.

Costs may vary, depending on which conversion suits you or your tool. For example, I can make your power tool to run off a car's battery or another tool's battery, for as little as £15, which includes a 5m long cable and connectors.

I can also check / service / clean your tool if you want, at a small extra cost, with your agreement. I am a qualified power tool technician. I have a fully equipped and fully stocked workshop on Ebury, in the city centre. I have a new and second hand tool without batteries. I only use the original tool and the tool can be converted and you will have a very expensive tool. I can also repair, which is a very good thing to have for your tool. You can come to me, or I can come to you if you live locally. Or you can post your tool to me.

Sensitive prices by a trustworthy technician. Any questions? Please call me. No unsolicited calls please. Genuine enquiries only.
