As you'll know, when you purchase the MAP TKS 101 2G 13.0m Pole Package, you're getting an incredible weight it is. In fact, this pole is over 75g lighter than its predecessor, reducing the risk of angler fatigue and allowing you to perform to the best of your abilities for longer. This pole is lighter than ever before due to the use of ultra-high grade carbon in the production process. High-grade carbon ensures that the poles are shaved from the weight of the pole without impacting on its strength or durability – ensuring that it can perform for as long as you do. What's more, the carbon used within the pole helps to improve its overall rigidity. Rigidity is important across the angling disciplines as it not only determines the structural stability of a product but it also increases its sensitivity. The rigidity of this pole ensures that

you'll be able to read even the slightest indication under the water – ensuring that you can respond to each nudge or tug with the confidence that you need, whether you're angling in a competitive match-style situation or you're pole fishing for.
