

## Phantom 3 Professional Drone (575 GBP)

Location **North, Lancashire**  
<https://www.freadsz.co.uk/x-559220-z>

Reluctant sale of a wonderful drone in absolutely great condition. Exceptionally well looked after and with many accessories so the buyer doesn't need to scour the internet looking for accessories that a Phantom 3 owner must have.

It's never been crashed, dropped or hard landed and flies absolutely true as you would expect from a drone that's been well cared for.

Included in the sale is  
Drone itself.. Phantom 3 professional Clip on Guards – easiest and fastest to install Remote Controller  
Phone Holder Props and spare props - dji 2x batteries – genuine dji Charger and lead Several sets of  
decals Additional set of quick fit prop guards (not as good as other set) Upgraded gimbal – helps protect  
from damage Genuine dji tools and spare Gimbal clamp Box of bits, screws, gimbal dampeners, etc.  
Micro USB charging / data cable Original box Original manual Home customised ultra-lightweight case  
with wheels.

I've updated the drone and controller, so it's ready to fly.

Ultra-lightweight case. I looked at many cases. The hard-shell ones provide the best protection but they're large, heavy and general just have carry handles. The light weight ones typically offer much less

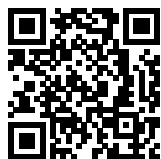

protection but are lighter and often adapted camera cases (which don't make it easy to pack for best protection) and most cases are over the top price...very few new types have wide. This makes it difficult to make your choice of holiday or general transport to the place. As a result I customised my own camera flight case with good protection and strong wings, with a customised and complete system of bag protection, with the least possible space. Images...birds....

Drone with battery Clip on Guards Remote Controller Phone Holder Props and spare props Quick fit prop guards Spare battery Charger and lead Gimbal Clamp Box of bits screws, gimbal dampeners etc. In addition the front zip offers space for sunshade and filter lenses.

Phantom 3 Professional features a built-in camera that shoots 4k video at up to 30 frames per second and captures stunning 12-megapixel still photos. The camera is paired with DJI's advance 3-axis gimbal

stabilization technology to ensure you record ultra-smooth, stable footage, no matter how you fly. A professional lens helps you shoot effortlessly stunning images in almost all lighting conditions, the Phantom 3 Professional's camera is equipped with a professional f/2.8 lens with a 94° field of view. This cutting edge lens with advance technology and software captures the whole picture, bringing colours to life just as you remember it without any unwanted lens distortion. EASY TO FLY Stay in complete control and fly the way you want with total confidence. The Phantom 3's advanced remote control is incredibly intuitive and easy to use. As well as offering customisable commands this intelligent controller features sensitive control sticks and dedicated buttons that let you take photos or bring it back to you at the touch of a button -up to 1.2 miles away! See the world from a new perspective and enjoy real time aerial video footage in stunning HD quality. Stream live HD video feed directly on your Smartphone or Tablet device and see exactly what the camera sees in absolute clarity. You can even adjust camera settings to line up the perfect shot. Thanks to Phantom 3's intelligent flight system you don't have to worry about always staying in control. For example, if you release the controls, the Phantom 3 will hover perfectly in place, holding both position and altitude until you direct it where to go next.

Is the difference between the Phantom 3 Professional and the Phantom 3 Advanced worth the extra money?

If you were buying new and paying hundreds of pounds more then it would depend on how much you are going to use the drone and what for. Buying used means the difference in price is negligible and I would always go for the Professional for two reasons.. ...

The DJI Phantom 3 Professional boasts a camera capable of shooting 4K footage at up to 30 fps, whilst the Advanced version is lower at 1080p. More specifically though the Phantom 3 Professional can shoot "Cinema" 4K, which is 4096x2160p, at 24 and 25 fps or "Consumer" 4k, which is 3840x2160, and goes from 24 and 25 fps up to 30 fps. UK 4K TV standards are 25 fps whilst US 4K TV standards are 30 fps. The second difference is the DJI Intelligent Flight Battery charger. The DJI Phantom 3 Professional comes with a 100-watt charger that means shorter charging times for the new 4480 mAh 4S lipo battery used in the new Phantom 3. This of course means less stress about having the right amount of batteries on a long day of shooting. The Phantom 3 Advanced comes with a 57-watt charging unit meaning longer charging times

Any questions please feel free to.
