 1x FireWire - 800 - On Demand

Overall, for the money, this is a fantastic PC / Media PC / Server with masses of storage.

Condition: As can be seen, the condition is excellent with barely any signs of wear or marks to the front. The top and sides do however have a few marks.

Set Up:

Dell Poweredge T110 II Media
PC - Intel CORE i3, 6 Terabyte
Hard Drives, Win 7

Given the type of Graphics Card used, you may need to adjust the Overscale in the Catalyst software supplied when connecting via HDMI to your TV or HDMI Monitor. This is very easy to do and is part and parcel of the setup of a system of this type.

Before we dispatch any PC:

Safety and security is important to us and so before any computer is dispatched we will have completely cleansed all sectors of the hard drive including previous boot sectors thus eliminating any previously installed software. Following this, every computer is scanned at a deep level for all known viruses including spyware and adware. Then and only then, will a PC be reloaded with the appropriate operating system and refurbished ready for.
